TYROTHERAPY

ROBOTIC-ASSISTED REHABILITATION

A new innovation in medical rehabilitation has launched at Eden Private Hospital. Following a successful trial in robotic and computer-assisted therapy devices of a world-leading provider, Eden Private Hospital is the first Private Hospital in South East Queensland to purchase the leading edge robotic equipment.

Tyrotherapy rehabilitation

The new service expansion puts patients at the heart of rehabilitation, delivering a more intensive treatment, in turn, improving patient outcomes and enhancing patient experience while making rehabilitation therapy more motivating and engaging.

The highly anticipated, evidenced-based robotic therapy supplements conventional rehabilitation therapy by increasing the number of repetitions during rehab, for positive patient gains.

Whether Stroke, spinal cord injury, accident, Parkinsons , Multiple Sclerosis disabilities; Tyromotion rehabilitation devices can be applied with a variety of symptoms utilised to improve and enhance recovery.

'Tyrotherapy' will be used in conjunction with conventional therapies and integrated into existing inpatient and day therapy programs at Eden Private Hospital.

TYROTHERAPY

GET BETTER. EVERY DAY.

Highly intensive, highly focused and highly motivating **training** can be achieved in an environment where traditional therapy and the latest technology mutually strengthen and support each other.

By using the most modern technologies such as robotics, sensor technology, virtual reality and gamification, we can help guide you through the rehabilitation process more intensively and motivationally.

Intensity, dose and motivation are the three components of 'Tyrotherapy' - three components which are required to be able to achieve the best possible therapeutic results within the shortest time, in a goal-orientated and motivated manner.

Tyrotherapy helps therapists and patients to do the right things at the right time, regardless of location, indication and phase of rehabilitation.

What does Tyrotherapy mean for my rehabilitation?

Tyrotherapy broadens the daily therapeutic routine of rehabilitation by training more intensively. It allows you to build on the foundations of traditional rehabilitation, develop ambition, achieve your goals and enjoy therapy.

Get Better. Every Day.

ROBOTIC REHABILITATION

Putting patients at the heart of rehabilitation

ALL AGE GROUPS

from paediatric to geriatric

ALL PHASES OF REHABILITATION

from acute to chronic

ALL DEGREES OF IMPAIRMENT

from mild to severe

ALL BODY REGIONS

upper and lower extremity

Eden Private Hospital, the longest operating hospital on the Sunshine Coast, is licensed to provide level five rehabilitation, offering intensive programs to patients across all age groups.

The new robotics will be available to inpatients, day patients and outpatients, with those who are uninsured able to access a package of sessions, tailored to their individual needs. The therapy is also available to patients under the National Disability Insurance Scheme (NDIS) and other funding schemes.

Discover how our new robotic-assisted therapy can help you improve your independence and quality of life today.

What are patients saying about Tyrotherapy?

'I was surprised at how good the equipment was and how quickly it made a difference to my grip strength and dexterity.'

'It's a fun way to do rehabilitation and much more stimulating and motivational than traditional treatment.'

'Tyrotherapy made the treatment go faster and it was more rewarding.'
